Colab environment

Labs will be run in a **Google Colaboratory** (Colab) environment. Every lab will consist of a **Python Jupyter notebook** hosted in Colab, that will let you write and execute Python code in your browser.

Make sure that you can log in to https://colab.research.google.com using your (personal) google account.

For each lab, you will follow these steps:

- Download the Jupyter notebook file (XXX.ipynb).
- Log in to Colab.
- Once logged in to Colab, File > Upload notebook ... and upload XXX.ipynb there.
- Follow the instructions in the notebook.
